Park House School - Year 12

Further Maths Assessment Manifest

- You will have 2 further maths papers
- These will be 55 minutes in your lesson

Core Pure

TopicsRedI can construct proofs using mathematical induction with contexts to include sums of series, divisibility and powers of matricesI can solve any quadratic equation with real coefficientsI can solve cubic or quartic equations with real coefficientsI can add, subtract, multiply and divide complex numbers in the form x+iy with x and y realI understand and use the terms 'real part' and 'imaginary part'I understand and use the complex conjugateI know that non-real roots of polynomial equations with real coefficients occur in conjugate pairsI can use and interpret Argand diagramsI can convert between Cartesian form and the modulus-argument form of a complex numbersI can construct and interpret simple loci in the Argand diagram such as z-a >r and arg(z-a)=thetaI can multiply a matrix by a scalarI understand and use zero and identity matricesI can perform and describe a single transformations in 2-DI can perform and describe a single transformation in 3-DI can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand and use singular and non-singular matrices	
to include sums of series, divisibility and powers of matricesI can solve any quadratic equation with real coefficientsI can solve cubic or quartic equations with real coefficientsI can add, subtract, multiply and divide complex numbers in the form x+iy with x and y realI understand and use the terms 'real part' and 'imaginary part'I understand and use the complex conjugateI know that non-real roots of polynomial equations with real coefficients occur in conjugate pairsI can use and interpret Argand diagramsI can convert between Cartesian form and the modulus-argument form of a complex numbersI can construct and interpret simple loci in the Argand diagram such as z-a >r and arg(z-a)=thetaI can add, subtract and multiply conformable matricesI understand and use zero and identity matricesI can perform successive matrix transformations in 2-DI can perform and describe a single transformation in 3-DI can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientation	
I can solve any quadratic equation with real coefficientsI can solve cubic or quartic equations with real coefficientsI can add, subtract, multiply and divide complex numbers in the form x+iy with x and y realI understand and use the terms 'real part' and 'imaginary part'I understand and use the complex conjugateI know that non-real roots of polynomial equations with real coefficients occur in conjugate pairsI can use and interpret Argand diagramsI can convert between Cartesian form and the modulus-argument form of a complex numbersI can construct and interpret simple loci in the Argand diagram such as $ z-a >r$ and $arg(z-a)=theta$ I can multiply a matrix by a scalarI understand and use zero and identity matricesI use matrices to represent linear transformations in 2-DI can perform and describe a single transformation in 3-DI can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand and use singular and non-singular matrices	
I can solve cubic or quartic equations with real coefficients I can add, subtract, multiply and divide complex numbers in the form x+iy with x and y real I understand and use the terms 'real part' and 'imaginary part' I understand and use the complex conjugate I know that non-real roots of polynomial equations with real coefficients occur in conjugate pairs I can use and interpret Argand diagrams I can convert between Cartesian form and the modulus-argument form of a complex numbers I can construct and interpret simple loci in the Argand diagram such as z-a >r and arg(z-a)=theta I can multiply a matrix by a scalar I understand and use zero and identity matrices I use matrices to represent linear transformations in 2-D I can perform and describe a single transformations I can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientation I understand and use singular and non-singular matrices	
I can add, subtract, multiply and divide complex numbers in the form x+iy with x and y realI understand and use the terms 'real part' and 'imaginary part'I understand and use the complex conjugateI know that non-real roots of polynomial equations with real coefficients occur in conjugate pairsI can use and interpret Argand diagramsI can convert between Cartesian form and the modulus-argument form of a complex numbersI can construct and interpret simple loci in the Argand diagram such as $ z-a >r$ and $arg(z-a)=theta$ I can add, subtract and multiply conformable matricesI can multiply a matrix by a scalarI understand and use zero and identity matricesI can perform successive matrix transformations in 2-DI can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand and use singular and non-singular matrices	
form x+iy with x and y realI understand and use the terms 'real part' and 'imaginary part'I understand and use the complex conjugateI know that non-real roots of polynomial equations with realcoefficients occur in conjugate pairsI can use and interpret Argand diagramsI can convert between Cartesian form and the modulus-argumentform of a complex numbersI can construct and interpret simple loci in the Argand diagramsuch as z-a >r and arg(z-a)=thetaI can multiply a matrix by a scalarI understand and use zero and identity matricesI use matrices to represent linear transformations in 2-DI can perform and describe a single transformation in 3-DI can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matricesI can calculate the properties of inverse matrices	
I understand and use the terms 'real part' and 'imaginary part'I understand and use the complex conjugateI know that non-real roots of polynomial equations with realcoefficients occur in conjugate pairsI can use and interpret Argand diagramsI can convert between Cartesian form and the modulus-argumentform of a complex numbersI can multiply and divide complex numbers in modulus-argumentformI can construct and interpret simple loci in the Argand diagramsuch as $ z-a >r$ and $arg(z-a)=theta$ I can multiply a matrix by a scalarI understand and use zero and identity matricesI understand and use zero and identity matricesI can perform successive matrix transformations in 2-DI can perform and describe a single transformation in 3-DI can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matricesI can calculate the properties of inverse matrices	
I understand and use the complex conjugateII know that non-real roots of polynomial equations with real coefficients occur in conjugate pairsII can use and interpret Argand diagramsII can convert between Cartesian form and the modulus-argument form of a complex numbersII can multiply and divide complex numbers in modulus-argument formII can construct and interpret simple loci in the Argand diagram such as $ z-a >r$ and $arg(z-a)=theta$ II can multiply a matrix by a scalarII understand and use zero and identity matricesII can perform successive matrix transformations in 2-DII can perform and describe a single transformationsII can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationII understand and use singular and non-singular matricesII understand the properties of inverse matricesI	
I know that non-real roots of polynomial equations with real coefficients occur in conjugate pairsII can use and interpret Argand diagramsII can convert between Cartesian form and the modulus-argument form of a complex numbersII can multiply and divide complex numbers in modulus-argument formII can construct and interpret simple loci in the Argand diagram such as $ z-a >r$ and $arg(z-a)=theta$ II can add, subtract and multiply conformable matricesII understand and use zero and identity matricesII can perform successive matrix transformations in 2-DII can find invariant points and lines for linear transformationsII can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationII understand and use singular and non-singular matricesII understand the properties of inverse matricesI	
coefficients occur in conjugate pairsII can use and interpret Argand diagramsII can convert between Cartesian form and the modulus-argument form of a complex numbersII can multiply and divide complex numbers in modulus-argument formII can construct and interpret simple loci in the Argand diagram such as z-a >r and arg(z-a)=thetaII can add, subtract and multiply conformable matricesII can multiply a matrix by a scalarII understand and use zero and identity matricesII can perform successive matrix transformations in 2-DII can find invariant points and lines for linear transformationsII can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationII understand and use singular and non-singular matricesII understand the properties of inverse matricesI	
I can use and interpret Argand diagramsII can convert between Cartesian form and the modulus-argument form of a complex numbersII can multiply and divide complex numbers in modulus-argument formII can construct and interpret simple loci in the Argand diagram such as $ z-a >r$ and $arg(z-a)=theta$ II can add, subtract and multiply conformable matricesII can multiply a matrix by a scalarII understand and use zero and identity matricesII can perform successive matrix transformations in 2-DII can perform and describe a single transformation in 3-DII can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationII understand and use singular and non-singular matricesII understand the properties of inverse matricesI	
I can convert between Cartesian form and the modulus-argument form of a complex numbersI can multiply and divide complex numbers in modulus-argument formI can construct and interpret simple loci in the Argand diagram such as z-a >r and arg(z-a)=thetaI can add, subtract and multiply conformable matricesI can multiply a matrix by a scalarI understand and use zero and identity matricesI can perform successive matrix transformations in 2-DI can perform and describe a single transformation in 3-DI can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand the properties of inverse matrices	
form of a complex numbersI can multiply and divide complex numbers in modulus-argumentformI can construct and interpret simple loci in the Argand diagramsuch as $ z-a > r$ and $arg(z-a) =$ thetaI can add, subtract and multiply conformable matricesI can multiply a matrix by a scalarI understand and use zero and identity matricesI use matrices to represent linear transformations in 2-DI can perform successive matrix transformationsI can perform and describe a single transformation in 3-DI can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matrices	
I can multiply and divide complex numbers in modulus-argument form I can construct and interpret simple loci in the Argand diagram such as z-a >r and arg(z-a)=theta I can add, subtract and multiply conformable matrices I can multiply a matrix by a scalar I understand and use zero and identity matrices I use matrices to represent linear transformations in 2-D I can perform successive matrix transformations I can perform and describe a single transformation in 3-D I can find invariant points and lines for linear transformations I can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientation I understand and use singular and non-singular matrices I understand the properties of inverse matrices	
formI can construct and interpret simple loci in the Argand diagram such as z-a >r and arg(z-a)=thetaI can add, subtract and multiply conformable matricesI can multiply a matrix by a scalarI understand and use zero and identity matricesI use matrices to represent linear transformations in 2-DI can perform successive matrix transformationsI can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand the properties of inverse matrices	
such as z-a >r and arg(z-a)=thetaI can add, subtract and multiply conformable matricesI can multiply a matrix by a scalarI understand and use zero and identity matricesI use matrices to represent linear transformations in 2-DI can perform successive matrix transformationsI can perform and describe a single transformation in 3-DI can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand the properties of inverse matrices	
such as z-a >r and arg(z-a)=thetaI can add, subtract and multiply conformable matricesI can multiply a matrix by a scalarI understand and use zero and identity matricesI use matrices to represent linear transformations in 2-DI can perform successive matrix transformationsI can perform and describe a single transformation in 3-DI can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand the properties of inverse matrices	
I can add, subtract and multiply conformable matricesI can multiply a matrix by a scalarI understand and use zero and identity matricesI use matrices to represent linear transformations in 2-DI can perform successive matrix transformationsI can perform and describe a single transformation in 3-DI can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand the properties of inverse matrices	<u> </u>
I can multiply a matrix by a scalarII understand and use zero and identity matricesII use matrices to represent linear transformations in 2-DII can perform successive matrix transformationsII can perform and describe a single transformation in 3-DII can find invariant points and lines for linear transformationsII can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matricesII understand the properties of inverse matricesI	
I understand and use zero and identity matricesII use matrices to represent linear transformations in 2-DII can perform successive matrix transformationsII can perform and describe a single transformation in 3-DII can find invariant points and lines for linear transformationsII can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matricesII understand the properties of inverse matricesI	
I use matrices to represent linear transformations in 2-DI can perform successive matrix transformationsI can perform and describe a single transformation in 3-DI can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand the properties of inverse matrices	
I can perform successive matrix transformationsII can perform and describe a single transformation in 3-DII can find invariant points and lines for linear transformationsII can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationII understand and use singular and non-singular matricesII understand the properties of inverse matricesI	
I can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand the properties of inverse matrices	
I can find invariant points and lines for linear transformationsI can calculate determinants of 2x2 and 3x3 matrices and interpretas scale factors, including the effect on orientationI understand and use singular and non-singular matricesI understand the properties of inverse matrices	
I can calculate determinants of 2x2 and 3x3 matrices and interpret as scale factors, including the effect on orientation I understand and use singular and non-singular matrices I understand the properties of inverse matrices	
as scale factors, including the effect on orientation I understand and use singular and non-singular matrices I understand the properties of inverse matrices	
I understand and use singular and non-singular matrices I understand the properties of inverse matrices	
I understand the properties of inverse matrices	
I can calculate and use the inverse of non-singular 2x2 and 3x3	
matrices	<u> </u>
I can solve three linear simultaneous equations in three variables	
by use of the inverse matrix	<u> </u>
I can interpret geometrically the solution and failure of solution of	
three simultaneous linear equations	<u> </u>
I understand and use the relationship between roots and	
coefficients of polynomial equations up to quartic equations	 <u> </u>
I can form a polynomial equation whose roots are a linear	
transformation of the roots of a given polynomial equation (of at	
least cubic degree)	
I understand and use formulae for the sum of integers, squares	
and cubes and use these to sum other series	
I can derive formulae for and calculate volumes of revolution	

I understand and use the vector and Cartesian forms of an		ı '
equation of a straight line in 3-D		1
I understand and use the vector and Cartesian forms of the		1
equation of a plane		l '
I can calculate the scalar product and use it to express the		'
equation of a plane, and to calculate the angle between two lines,		1
the angle between two planes and the angle between a line and a		1
plane		1
I can check whether vectors are perpendicular by using the scalar		1
product		
I can find the intersection of a line and a plane		
I can calculate the perpendicular distance between two lines, from		
a point to a line and from a point to a plane

Mechanics

Topics	Red	Amber	Green
I can calculate the momentum and impulse			
I can use the impulse-momentum principle			
I can use the principle of the conservation of momentum applied			
to two spheres colliding directly			
I can calculate the momentum as a vector and use the impulse-			
momentum principle in vector form			
I can calculate kinetic energy, potential energy, work done and			
power			
I can use the work-energy principle and the principle of			
conservation of mechanical energy			
I can use the work-energy principle involving kinetic energy,			
potential energy and elastic energy			
I can understand and use Newton's law of restitution for the direct			
impact of elastic spheres			
I can answer problems involving the loss of kinetic energy due to			
an impact
